

## **Lesson Plans for Week of March 30<sup>th</sup>**

Students: please review the guidelines for E Learning that I emailed and shared with you last week. I also shared and emailed a document that contains your class code and password for ReadWorks, which we will be using in the future. Please carefully review those documents. Many questions you may have can be answered in those documents. Also, please check your email as frequently as possible. That will be our best method of communication.

### **7<sup>th</sup> Grade Science**

#### **Monday**

Using either your textbook (if you brought it home) or our online textbook on Pearson Realize, access chapter one, lesson three in the Cells and Heredity book. It can be found on pages 22-27 and is titled, "Chemical Compounds in Cells." If you need help accessing the textbook online, just let me know. Use our 1, 2, 3 strategy to read and take notes on this lesson. Also, write down any questions you have while you are reading. I will be answering those tomorrow.

#### **Tuesday**

Email me any questions you have about this lesson. If you feel like it would be easier to ask your questions in video form, record a video of yourself asking them and attach it to an email. You can use the camera app in the start menu on your device to do this. Make sure your microphone is turned on so I can hear you. If you would prefer just to send a voice recording, you can use the voice recorder app in the start menu. I am fine whichever you choose. You may need to ask for help from a parent for this. You need to submit at least one question about the lesson by the end of the day. I will answer your questions by the end of the day.

#### **Wednesday**

I will be sharing a Word document with questions that you need to answer on this lesson. You will have this document at the beginning of the day today. You will not be able to edit this document. Instead, you should open a new Word document and answer your questions there. Just number your answers with the same numbers as the questions, just like you would do when answering questions on paper in class. When you have finished answering the questions, rename your file with your last name, the lesson number, and your grade level and period number. For example, if I were a student submitting this file my file name would be Tucker Lesson 3 7-3 (if I were in third period science). Share your Word document with me on Office 365 by the end of the day to receive full credit. If you have any questions about the assignment, ask them in the same way you did on Tuesday. Email, video record, or voice record your questions and send them to me.

**Remember:** E Learning is new for all of us. I understand that this is very different from our normal classroom environment. I will be flexible for you, and I hope that you will do the same for me. We will make it through this together!
